Ocean currents that have a northward or southward component, such as the warm Gulf Stream in the North Atlantic or the cold Peru The Eight Currents Current off South America, effectively exchange heat between low and high latitudes. The Northern Hemisphere lacks continuous open water bordering the Arctic and so has no corresponding powerful circumpolar current, but there are small cold currents flowing south through the Bering Strait to form the Oya and Anadyr currents off eastern Russia and the California Current off western North America; others flow south around Greenland to form the cold The Eight Currents and East Greenland currents. The resulting highs and lows of ocean pressure... ThankYouforYourContribution!Carter,L. Here, the analysis is a guide for future work when more ADCP data are available. The system is able to generate surface currents maps for the inner Galway Bay area see Figure 1.

Bottom-velocity fields originated from wind wave and wind currents during transport of water through the oceans is slowed by friction, with surrounding fluid moving at a different velocity. An additional consequence of upwelling and downwelling for stratified waters is to create a baroclinic field of mass.
