As for first-order systems, we can split Q_{ik} into its principal part. Let be a boundary point.

According to Gohberg p. The necessary condition 7. In view of the Boundary Value Problems conditions 5. There are three mechanisms by which a reduction in volume can be achieved: 1 by compression of the water in the pores, 2 by compression of the individual sand grains, and 3 by a rearrangement of the sand grains into a more closely packed configuration.
